

Daniel Electric Company: Serving Dallas /Fort Worth

Time Change: Good Time to Change Smoke Detector Battery

Many Consumers do not realize that the National Fire Protection Agency recommends that you replace smoke detector batteries every 6 months. Once they reach this age, there is only a 50/50 chance that they will work.

A properly installed and tested smoke detector is one of the simplest and most effective things you can do to protect yourself and your family from a home fire. Almost all smoke alarms need to have their batteries replaced each year, including wired smoke alarms with a battery backup.

During the month November, Daniel Electric offers a highly trained staff to make sure that you and your family are safe.
